

Anand and Anand launches prototype 3D hologram of Sir C.V. Raman

Feb 22, 2023

IP Law Firm Anand and Anand launches the prototype of a 3D hologram of India's first Nobel laureate, Sir C.V. Raman, known for his work in the field of light scattering, better known as the Raman effect, at the Global IP Convention in Goa; Firm's Managing Partner, Mr. Pravin Anand states that *"It is most unfortunate that when you talk to children and ask*

about Math, they go 'ugh', they don't like it, they move away from it and there is no technology, there is no innovation without science and technology. So, my desire for long has been that when you go to museums, you find artists, you find actors, sportsmen and political leaders but no scientists..."; In this regard, the Firm highlights that *"The launch of C V Raman's prototype is the first step towards the firm building a hologram museum of scientists to science and technology amongst today's youth, and to celebrate scientists who are the bedrock of India's innovation story."*; This unveiling comes close on the heels of the firm launching its 'Digital Group' to be headed by Dr. Ajai Garg, a former director in MeitY, which would focus on Artificial Intelligence, Data Protection, Gaming, Drones, Blockchain/NFT and related issues emanating out of exponential technological changes across industries and piqued interest in everything 'Digital'.
